CITY OF BLOOMINGTON
2019-2020 DOWNTOWN PARKING UTILIZATION STUDY
EXECUTIVE SUMMARY

DESCRIPTION

In July 2019, City Parking Enforcement Staff began a year long study of parking space utilization in the downtown area. The study limits were Main and Center Streets between Front and Mulberry Streets. To avoid overtime cost, the study was conducted only during the normal work hours of the staff, which is 7:30am to 4:00pm.

The purpose of the study was to determine how much and how often the parking spaces in the study limits are used during an entire year. To obtain the data, parking staff drove or walked the study limits once every hour and completed a spreadsheet indicating if each of the parking spaces were occupied or unoccupied by a vehicle. Only legal parking spaces, including reserved accessible spaces, were included in the study. Loading zones, end of block safety zones and other unmarked spaces were not included even if a vehicle was parked there.

COMPLICATIONS

During the study, a few complications arose that made it more challenging to collect data. The first challenge was street repairs and resurfacing work performed during the first few months of the study. Street repairs were completed rather quickly, but the pavement markings, including parking space markings, were replaced with temporary markings that did not match the originals. A standard and reserved accessible space in the 400 block of Main Street were omitted when the temporary pavement markings were installed. Although the change was minor, the utilization analysis accounts for the reduced spaces.

The second complication was COVID-19, which impacted downtown parking near the end of March 2020. Due to the Governor's "Stay-At-Home" order, parking in the downtown area was greatly reduced. Although this challenge did not affect staff's ability to collect data, the reduced parking was expected to skew the overall study results. To account for this issue, the final reports have been split between Pre-COVID and COVID time periods.

The final complication was also a consequence of COVID-19. Once the stay at home order was lifted, other restrictions were imposed. These restrictions resulted in multiple parking spaces being re-commissioned to outdoor dining. To account for this issue, the final reports for the COVID time period were split again. Since outdoor dining was not present during the early COVID period, all parking spaces were included in the study. Once parking spaces were converted to outdoor dining, they were removed from the study and not included in the utilization analysis.

RESULTS

In general, study results indicate that adequate parking spaces are available in the downtown area. Space utilization rates vary with location and time of day, but parking spaces were always available. Pre-COVID results show the highest utilization on Main Street was 83% in the 100

block from 9am to 10am. The highest utilization on Main Street during COVID occurred while outdoor dining was in place. The utilization was also 83% but occurred in the 400 block from 11am to noon. The highest utilization of reserved accessible parking on Main Street occurred in the 500 block prior to COVID and the 300 block during COVID with outdoor dining in place. The utilization rate for both was 62%. The overall average utilization of parking on Main Street was 48% prior to COVID and 41% during COVID.

Pre-COVID results for Center Street show the highest utilization at 77% in the 100 block from noon to 1pm. The highest utilization on Center Street during COVID was 89% and occurred in the 300 block from 10am to 11am. The parking utilization remained the same in this block even when outdoor dining was in place. The highest utilization of reserved accessible parking on Center Street occurred in the 500 block for both pre-COVID and COVID time periods. The utilization rates were 73% prior to COVID and 84% during COVID. No reserved accessible spaces were used for outdoor dining on Center Street. The overall average utilization of parking on Center Street was 48% prior to COVID and 47% during COVID.
